

Romédés **Energetic in** **Engineering**

That works!

Accomplished and results oriented

At Romédes Engineering we bring energy, passion, precision and drive to everything we do. Founded in 1998, the firm has developed into an experienced and successful business, staffed by a highly qualified group of team players. You will find us in Lichtenvoorde, at the centre of a

geographical rectangle formed by the towns of Arnhem, Doetinchem, Winterswijk and Enschede. A long list of clients both at home and abroad have come to know Romédes as "the Energetic Engineers from the East of Holland".

Thinkers and doers

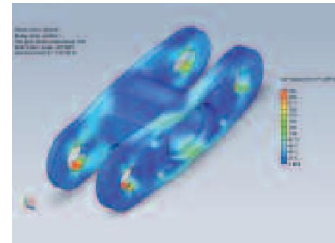

One of the first things that will strike you about Romédes Engineering is our informal business culture. A well arranged organisational structure and short lines of communication create an efficient and professional working environment. You'll see the effects of that too. Our set-up delivers super smooth communication both internal and external, with entirely positive effects on the end result. Romédes Engineering have a quite conscious preference for this kind of small-scale arrangement. On the one hand it helps us to deliver consistent

quality, while on the other hand it provides the ideal basis for individual attention to the client's requirements. We aren't aiming to be the biggest, just the best.

Teamwork

Our staff bring a genuine personal commitment to everything they do. What that means for you is a close-knit partnership, with you in the driving seat, whether you see us as a substitute engineering department or as an extension of your own organisation. You play the pivotal role in the engineering team, it's you who will determine the arrangements, with trust, crystal clear communications and professionalism always at the centre. And that trust is the result of our determination to deliver on our promises, every time.

Knowledge and expertise

You can always rely on Romédes to take a systematic approach. Once we have a clear picture of your package of requirements we set to work to deliver the optimal solution, with attention right down to the smallest detail. It may be a redesign using existing machinery, or an entirely new concept.

Like more information?

Want to see how we can support you in making a success of your next engineering project? Make an appointment for a personal meeting, and we can look together at what a collaboration could mean for you.

You can call on us for:

- Project management
- Recommendations on and implementation of production automation projects
- Product design
- Design and detailing
- Budget and cost price calculations
- Assistance in the development and production of components
- Support during the acquisition process and the design of test protocols
- CE marking: preparatory work and certification
- Static and dynamic calculations
- FEM calculations
- Temporary attachments by agreement

Our accomplishments

- Cam-controlled assembly machines delivering up to 600 inserts a minute.
- Automatic and semi-automatic assembly units for electronics components like speakers for hearing aids and mobile phones, turning out up to 200 items a minute.
- Assembly units for the medical sector and semiconductor industry.
- an lid separation unit, up to 1600 items a minute.
- Specialist metal, wood and plastic processing machinery and tooling for the automobile and foodstuffs industries.

Our core markets

- Precision engineering sector
- Electronic component assembly
- Automotive
- Tooling
- General machine manufacture
- Food sector
- Metalworking and woodworking industries
- Medical and pharmaceutical sectors
