

Romédés
**Specials with
added value**

Raise your pace of production, automatically

Production automation in its optimal form

Romédés Specials are a sister company of Romédés Engineering and specialise in the manufacture of top quality production units and supply equipment for mechanical automation projects. We use a huge range of production techniques and work together with highly-regarded suppliers both at home and abroad.

Their knowledge and expertise combine seamlessly with our passion for results-oriented engineering. This is a combination with a great deal to offer you. Not to mention our outstandingly competitive pricing.

Returns and outcomes

Come to us and you will be putting your production automation project in safe hands. We will work with you to find the optimal solution in terms of earn-back time, profitability and results. We take a fresh look at existing technologies, and tweak and improve them where possible. This approach can avoid unnecessary spending and long engineering lead times. Our products are built on a modular system and are available in a range of capacities and dimensions. They have found applications in the most diverse sectors and are in use alongside numerous different production methods. Romédes Engineering carry out individual engineering of bespoke units to meet your precise specifications.

More than the sum of its parts

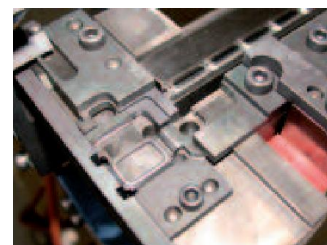

You will find Romédes Engineering and Romédes Specials at the same address. The engineering bureau was established in 1998, and has developed into an experienced and

successful business, staffed by a highly qualified group of team players. Romédes Specials was set up in 2002 to produce automation units and machinery in-house for third parties. Our small-scale approach helps us to deliver consistent quality and provides the ideal basis for individual attention to the client's requirements. The whole can sometimes be more than the sum of its parts.

Partnership from start to finish

Our staff bring a genuine personal commitment to everything they do. What that means

for you is a close-knit partnership, with you in the driving seat from start to finish. We attend to everything, down to the finest detail, as you will note as soon as we map out your wishes and requirements. We leave nothing to chance. Once any necessary engineering is complete we dot the i's, cross the t's and move on to realisation of the chosen solution: assembly, set-up and final checking. Your order doesn't leave Romédes Specials until we have completed an extensive quality and pre-delivery report. Trust, crystal-clear communications and professionalism are at the heart of everything we do. And that trust is the result of our determination to deliver on our promises, every time.

Like to know more?

Why not make an appointment for a personal meeting where we can discuss what we have to offer you as you consider your next new machinery or automation project? You'll find we have a lot to offer.

Our specialisms:

- Automation systems
- Prototyping
- Cam controlled machinery
- Feeder technology by bowl and linear feeders
- Belt bunkers
- Conveyor systems

Our accomplishments

- Test equipment semi-conductor industry
- Pick and place units up to 200 strokes to minute
- Several feeding units for different industries
- Machinery for automotive and general machine manufactory

Our core markets

- Precision engineering sector
- Electronic component assembly
- Automotive
- Tooling
- General machine manufacture
- Foodstuffs sector
- Metalworking, woodworking and plastics industries
- Medical and pharmaceutical sectors
